

# Cloud Readiness Assessment

# HAYNE.cloud

## Overview

Cloud Readiness Assessment (CRA) checks the suitability and compatibility of a company's current on-premises server infrastructure and applications to see how these can be migrated to the cloud.

## What does it do?

It's an assessment of your company's current server infrastructure and applications. There are three assessment packages from bronze to gold, which range from essential budgetary costs to a complete cloud migration strategy.

## Who is this for?

The CRA suits companies wishing to migrate from on-premises infrastructure to cloud hosted services.

## About the CRA

Assessments are carried out by one of our Microsoft qualified Cloud Consultants.

Before starting your CRA, pre-sales will confirm the recommended assessment level, timeframe and cost.

Following your completed assessment, you can choose to undertake further professional services to implement the recommended changes.
